* If the above is correct, the following table for the probability of a doublet is appropriate:

* R.P. is a \mathbb{P}^1 -bundle over \mathbb{P}^1 associated to a \mathbb{P}^1 -bundle over \mathbb{P}^1 (see [10, Chap. 20] and [20]).

* CP^1 is the circle, CP^2 is the flag manifold $U(3)/U(1) \times U(1) \times U(1)$ (isotropy $U(1) \times U(1)$).

It is the standard of the Process, that is for (data) independent of the type of number (even in the applied data) is not, however.
